

**Headquarters (HQ):** Acts as the central hub and primary data center for the organization.

**Regional Data Center:** Serve as localized hubs that connect to the HQ and cater to specific geographic areas.

**Branch Offices:** Office locations for administrative, customer service, and support functions.

**Delivery Hubs:** Centers for distribution, dispatch, and delivery operations.

**Warehouses:** Storage locations for inventory management and fulfillment.

**Internet Gateway:** Manages and routes all internet-bound traffic for the organization.

**Firewall:** Monitors and protects network traffic at HQ, RDCs, and the Internet Gateway.

**Client Devices:** Devices used by staff, field agents, and sometimes customers, including computers, mobile devices, and other endpoints.

### J & T Express Network Topology
